

Dear business partners,

we have prepared an updated catalogue of chandelier arms and components for you.

Chandelier arms, which serve as a semi product for completion of crystal chandeliers, we produce them from borosilicate glass tubes with diameter 15; 17; 17,4; 17,6; 22; 30 and newly for a great demand with diameter 19 mm. We can create other modifications of section and angles of bending of chandelier arms after a consultation with you.

Axial span of chandelier arms

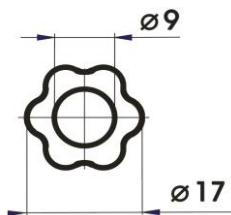

The distance of axis, which lead in the middle of diameter at the beginning and ending of chandelier arms gives the axial span. This is stated in the designation of chandelier arms and is marked on the technical drawing of every product.

The implementation of the surface of tubes

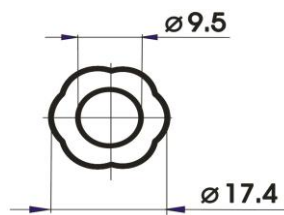

Smooth profile, deep and smooth profile - straight or twisted.

Surface modification by coating - gold or silver is possible for chandelier arms to maximal axial span 325 mm. Coating is also possible for siliqua and socket cover.

- 799 000 200 251 Gold coating of chandelier arms
(max. size of chandelier arms 325 mm)
- 799 000 200 252 Silver coating of chandelier arms
(max. size of chandelier arms 325 mm)

WIRING

We can offer you a delivery of wiring with all offered diametres of chandelier arms. Wiring contains a plastic socket with a small screw, a cable and a nut.

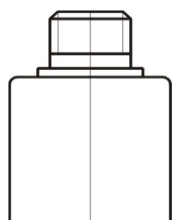

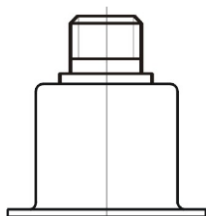

PLASTERING AND COATING OF CHANDELIER ARMS

Basic options of coating are front and back - front with one front hole.

In case that the order includes a delivery of wiring, there is always a washer for the centring of the bowl on the front coating of chandelier arms diameter 17 and 17,4 mm - with 1 hole, on the chandelier arms diameter 22 mm is this washer without a hole.

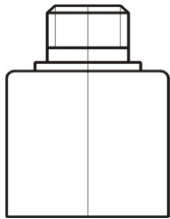

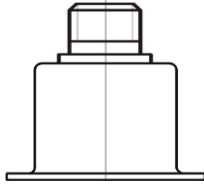

There is serrated nut on the back coating of the chandelier arm.

If our coating doesn't satisfy your requirements, we accept yours.
